An Introduction to. Nanotechnology. Nanotechnology is

defined as the study and use of structures between 1

nanometer and 100 nanometers in size. To give you an idea

of how small that is, it would take eight hundred 100

nanometer particles side by side to match the width of a

human hair. While this is the most common definition of

nanotechnology researchers with various focuses have

slightly different definitions.

Nanotechnology Introduction - Understanding

Nanotechnology represents a revolutionary path for

technological development that concerns the management of

material at the nanometer scale (one billion times smaller

than a meter). Nanotechnology factually means any

technology on the nanoscale that has numerous applications

in the real world.
