Environmental

Pharmaceutical drugs and foods affect an organism's biology. Some also study how environmental toxins are metabolized, and how they may disrupt biological processes. Because biochemistry encompasses all living things, it's a very wide field of study with a range of applications in medicine, agriculture, and the environment.

Biochem Environmental Foundation classes are offered in organic and inorganic chemistry, analytical and physical chemistry, and biochemistry. They are also required to take an assortment of classes in mathematics and physics. Some advanced electives include Medicinal Chemistry, Environmental Chemistry, Bio-inorganic Chemistry, and Theories of Electrons.

Environmental chemistry is the scientific study of the chemical and biochemical phenomena that occur in natural places. It should not be confused with green chemistry, which seeks to reduce potential pollution at its source. It can be defined as the study of the sources, reactions, transport, effects, and fates of chemical species in

Environmental chemistry - Wikipedia

Overview. Environmental chemists monitor what is in the air, water, and soil to study how chemicals enter the environment, what affects they have, and how human activity affects the environment. They monitor the source and extent of pollution and contamination, especially compounds that affect human health, and they promote sustainability, conservation, and protection.

workforce, or to continue studies in some of the environmental sciences.

Environmental Chemistry - Chemistry and Biochemistry
Although it is based on toxicology, environmental toxicology draws heavily on principles and techniques from other fields, including biochemistry, cell biology, developmental biology, and genetics. Among its primary interests are the assessment of toxic substances in the environment, the monitoring of environments for the presence of toxic substances, the effects of toxins on biotic and abiotic components of ecosystems,
