Here are the most common security myths we need to know. Myth #1: This can ' t happen to me, only important or rich people are targeted. Boy, if I had a nickel for every time I heard that! This security myth is named by many security experts

security through obscurity.

~~Top 10 Internet Security Myths Debunked [Updated]~~

Myth 1. You can do it yourself. This is a bad idea even if you only have a small business. You are only one person and there may be more than one person trying to break in, this straight away leaves you with bad odds. By trying to be your own security you are putting your own safety in danger, do yourself a favour and hire a professional.

~~5 Security Myths – Winns Services~~

A deconstruction of the book Myths of Security. Signature based Anti Virus is largely useless. Vulnerability disclosure actually helps the bad guys. Most exploits are based on public disclosures – so it becomes a race to patch first. It ' s better to write down a strong password than to memorize a weak one.
